Look Who’s Talking About The Crystalens AO!
Accommodation Meets Asphericity.

**Alan Aker, MD**  
**Boca Raton, FL**

“Crystalens is the best lens choice I can offer my patients, and if I were having cataract surgery I would choose the Crystalens for myself.”

**Omar Almallah, MD**  
**Barnegat, NJ**

“For my patients that require the most functional vision for both day time and night time activities while at the same time reducing their need for spectacle correction, the Crystalens AO is my primary choice for successful outcomes in this group of demanding patients.”

**Lisa Brothers Arbisser, MD**  
**Bettendorf, IA**

“Congratulations to B+L for applying their aspheric technology to the Crystalens AO. This model is my accommodative lens of choice as the modulation transfer function is optimized improving image quality without any loss of near function according to my personal patient data.”

**Robert E. Brass, MD**  
**Latham, NY**

“My Crystalens patients get glare free, halo free distance vision day and night. They get excellent intermediate, and very functional near vision. My Crystalens patients are universally happy, and that makes me happy.”

**Harvey Carter, MD**  
**Dallas, TX**

“I put in the first FDA approved Crystalens in 2003 and have implanted every version of the Crystalens since for a series of well over 3,000 procedures. The new Crystalens AO lens combines the best of the AT-50 platform with the improved aspheric aberration free optic. The baby boomer has already chosen aberration reducing laser vision correction as the best approach and will demand this same standard from their presbyopia correction going forward. If the surgeon has any ethical question about implanting an aberration inducing multifocal implant in a patient who may develop a macular pathology later in life, then this lens is your answer.”

**Lawrence C. Chao, MD**  
**Irvine, CA**

“Many surgeons find a place of complacency with their procedures. This is where we as surgeons become dinosaurs. Crystalens helps push our thinking and skills to that place where we wish to be- at the forefront of medicine.”

**D. Michael Colvard MD**  
**Encino, CA**

“The Crystalens AO means never having to say you’re sorry. The Crystalens AO is the only presbyopia correcting IOL on the market today that improves the quality of vision- all multifocal options diminish it. For me, the choice is simple. I choose the IOL for my patients that I would choose for myself, if I were to need cataract surgery.”

**Steven R. Corwin, MD**  
**Marietta, GA**

“I have been very pleased with the performance of the Crystalens. Unlike a multifocal IOL, I can put it in the patient’s first eye and not have to deal with the whole neuroadaptation issue until the second eye is operated on. I have also used it in a number of patients who only need unilateral cataract surgery and they are very happy with the results. Additionally, problems with glare and halos at night are pretty much non-existent with this lens.”

**Uday Devgan, MD, FACS**  
**Los Angeles, CA**

“The Crystalens AO combines the benefits of a zero spherical aberration optic to the proven Crystalens platform. This gives surgeons a larger sweet-spot and gives patients a wide range of excellent vision. For surgeons who offer premium lens implants to their patients, the Crystalens AO is a welcome addition to our portfolio of IOL options.”

**John Doane, MD, FACS**  
**Kansas City, MO**

“I have always believed that a multifocal lens of variable focality would win the day for presbyopic IOLs. I have been using B+L products either in FDA clinical trials or post-approval commercial use for over 10 years. Suffice it to say the Crystalens platform gets better every year and makes the treatment of presbyopia a rewarding experience for our patients and practice.”

**Mike J. Endl, MD**  
**Niagra Falls, NY**

“The Crystalens AO has been a wonderful addition to my practice. It combines the rapid post operative adjustment period of an accommodating lens with now the added optical quality for a wider range of patients.”
It’s Easy To Get Started With Crystalens AO.

Tom Elmer Jr. MD
Niagra Falls, NY

“I chose Crystalens for my Mom”

Steve Farkas, MD
Gainesville, GA

“B&L has raised the bar with the introduction of the Crystalens AO lens. The aspheric optics have provided an increase in near depth of field for my patients, and the thinner platform allows for better accommodation. There are no worries of implant glistenings or loss of contrast sensitivity, and the lens provides the absolute best quality vision of any premium IOL on the market today.”

Clause Fichte, MD
Niagra Falls, NY

“I’ve been impressed with the rapid adaptation by patients to the AO lens in terms of quality night vision as well as intermediate and binocular near function. This is the best Crystalens yet in terms of stability and predicted outcome. The AO optics have also been excellent for post-refractive cases involving older technology such as RK and first generation PRK/Lasik where we are dealing with coma and secondary astigmatism.”

Peter Foote, MD
Milwaukee, WI

“Whenever there is reason for concern about the health of the macula, either now or in the future, Crystalens AO is my choice for a near vision correcting IOL.”

Daniel B. Goldberg, MD
Little Silver, NJ

“Crystalens has evolved into the leading presbyIOL in my practice. The improved design now delivers superior image quality, and improved reading performance. Bausch & Lomb has built a formidable team to back up the surgeons thru the learning curve, and afterwards with excellent IOL power consultations, and follow-up practice management pearls. Multifocal IOLs are simpler to manage post-op but concerns about image quality, and side-effects will limit their use. Now that the surgical issues are worked out, particularity capsule management, as well as management of patient expectations during the healing period prior to YAG, and routine YAG prior to refractive endpoint, Crystalens is ready for primetime!”

Jeffrey D. Horn, MD
Nashville, TN

“I have been very impressed with the Crystalens AO lens. I routinely see both uncorrected and best distance corrected near acuity of J2 and even J1. It has exceeded my expectations and my patients love it.”

John S. Jarstad, MD, FAAO
Auburn, WA

“A vast majority of my patients are selecting Crystalens AO because the results have been outstanding. The Crystalens AO delivers and puts the fun back into managing Premium IOLs. It is exciting to provide all distance vision to my patients without having the worries and hassles of haloes and rings. With Boeing, Microsoft, and the high tech environment, we see some of the most critically demanding patients in the Seattle area. It’s gratifying to have a lens like the Crystalens that provides crystal clear and reliable distance, near and intermediate vision that meets and frequently exceeds the expectations of our highly demanding patient population.”

Kirk Labor, MD
Grapevine, TX

“Presbyopia correcting intraocular lenses have been a great addition to my practice. As such, the new Crystalens AO represents the best such lens to give my patients the highest level of satisfaction when it comes to giving them functional vision over all viewing distances. Indeed, the Crystalens AO has helped my practice to achieve conversion rates that routinely surpass 60 percent. I have no problem telling my patients that the Crystalens AO is a lens I would choose to have placed in my own eyes.”

Gregg Feinerman, MD
Newport Beach, CA

“Crystalens provides the best visual quality of any presbyopic IOL. That’s why I implanted it in my father and other family members.”

John Hovanesian, MD
Laguna Hills, CA

“Crystalens has evolved into the leading presbyIOL in my practice. The improved design now delivers superior image quality, and improved reading performance. Bausch & Lomb has built a formidable team to back up the surgeons thru the learning curve, and afterwards with excellent IOL power consultations, and follow-up practice management pearls. Multifocal IOLs are simpler to manage post-op but concerns about image quality, and side-effects will limit their use. Now that the surgical issues are worked out, particularity capsule management, as well as management of patient expectations during the healing period prior to YAG, and routine YAG prior to refractive endpoint, Crystalens is ready for primetime!”

Gregg Feinerman, MD
Newport Beach, CA

“Crystalens provides the best visual quality of any presbyopic IOL. That’s why I implanted it in my father and other family members.”

John Hovanesian, MD
Laguna Hills, CA

“Crystalens AO gives patients the range and quality of vision they want while giving surgeons the confidence that comes from implanting the best optic design available.”
Outstanding Vision Quality.

Jeff Martin, MD
New York, NY
“The Crystalens AO has been a wonderful addition to our refractive cataract practice. It has a greater “Sweet Spot” making our jobs easier.”

Richard L. Lindstrom, MD
Bloomington, MN
“The Crystalens is the simplest premium channel IOL for the cataract surgeon to adopt into their practice.”

Jay Lippman, MD
New Rochelle, NY
“The AO provides a welcome companion to the HD in cases where slight refractive ametropia is either anticipated or desired. The subjective response to this lens is quite gratifying.”

Scott MacRae, MD
Rochester, NY
“The Crystalens AO is my clear choice for distance vision in the dominant eye in premium IOL patients. The Crystalens HD is my favorite lens for near in the non dominant eye. The optics of both lenses are excellent for distance and there is no compromise on visual quality. Our optics lab has studied these lenses as well as all the currently available multifocals in detail and the Crystalens AO and HD are the best of this generation IOLs.”

Suresh Mandava, MD
Greenwich, CT
“The Crystalens AO has been a most welcome addition for my practice. Providing accommodation is a worthy goal, but sacrificing visual quality is not a compromise that I am usually willing to make. The Crystalens AO minimizes aberrations and accommodates, making it the IOL that best emulates a perfect human lens, and therefore the most natural choice. The decision and consultation process has suddenly become much easier for me.”

J.E. “Jay” McDonald, II, MD
Fayetteville, AR
“Crystalens AO is the convergence of the highest quality optics with the leading platform for Spectacle Independence for my cataract patients. Through the AO Crystalens my patients enjoy the best results and I can rest assured I have been a steward of their visual capacity for not only now but the rest of their life. Bausch and Lomb continues to lead the industry in bringing patients throughout the world the leading edge in quality vision.”

Frances Dickinson “Dickie” McMullan, MD PC
Atlanta, GA
“The Crystalens holds a definite place in my armamentarium because the optics of this fine lens deliver the “purest” (highest MTF) distance vision with the best contrast sensitivity of the premium lenses. My patients’ refractive results are spot-on, their goals are met, they are happy with their outcomes. Great way to make a living.”

William G. Myers, MD
Chicago, IL
“The Crystalens AO is a significant advance in the Crystalens technology. Minor decentrations are less of an issue and the power predictions have been spot on.”

Mohammad Neal, MD
Anaheim, CA
“Crystalens AO provides uncompromised visual quality at the greatest range of distances”.

Louis “Skip” Nichamin, MD
Punxsutawney, PA
“As an early adopter of the Crystalens AO technology, this deluxe implant has helped build my refractive cataract lens based practice and occupies a unique niche within our arsenal of implants. I am even more enthusiastic now with the improved performance of the Crystalens AO.”

Larry Patterson, MD
Crossville, TN
“I was recently in a meeting with 30 other prominent ophthalmologists. When asked how many had ever explanted a multifocal lens, all present raised their hands. When asked how many had ever explanted a Crystalens, only one hand went up. I’ve used them all, but this is the only available implant I’d want in my eyes.”

Robert J. Weinstock, MD
Largo, Florida

“The Crystalens AO is my premium implant of choice. It delivers the greatest range of vision without compromising contrast sensitivity and quality of vision.”

Larry Roel, MD
Spartanburg, SC

“The Crystalens has the least side effects and gives the highest quality of vision than any other premium lens. It also has the widest range of vision than any other lens I have used. This is the lens I would choose for my own eyes.”

Jeffrey Whitman, MD
Dallas, TX

“What first impressed me was the power predictability of the Crystalens AO using the B &L targeting guidelines but what really blew me and my staff away is how good the near visions are with this new and improved lens.”

Steven G. Safran MD
Lawrenceville, NJ

“The aspheric Crystalens AO is the first and only presbyopia correcting implant that is truly free of any compromise in terms of quality of vision. When I offer demanding patients a “premium” IOL I need to know that I am not sacrificing the results of a perfect procedure with less than perfect optics. I feel confident with the Crystalens AO that I am giving my patients the best quality of vision possible with the added benefit of a significantly improved range of uncorrected visual clarity. This is the Crystalens I’ve been waiting for; no compromises, no suprises and predictable, reproducible outcomes.”

Varunan Sivalingam, MD
Philadelphia, PA

“I have found that the new Crystalens AO has a profound “wow” factor in my patients. The forgiveness of this lens, as well as a true accommodating aspheric IOL, is what appeals to me the most when offering a patient the best premium product available today.”

Jack Singer, MD
Randolph, VT

“The addition of the accommodating, aberration free, aspheric Crystalens AO to the line of current Crystalens models enables me to confidently offer presbyopia correction to a wider range of my patients. With three very good options, a greater percentage of patients can enjoy the superb quality of functional vision that is free from adverse optical effects of multifocal lenses. Just as fine wines are paired with select foods, I have consistently had “20/Happy” post operative patients by applying the art of “Crystalens pairing.”

Jonathan D. Solomon, MD
Bowie, MD

“I have been implanting the Crystalens since the -45 version. The aspheric platform provides the purest distance image while maintaining an aberration-free near image making it an optimal choice for those seeking spectacle independence.”

Sheri L. Rowen, MD
Baltimore, MD

“I have been using the Crystalens IOL since Feb 2004 with great delight and success. I have found that our patients appreciate their wonderful clear vision, and now even more so with the AO. They rarely complain of visual aberrations or dysphotopsias, and I feel comfortable that they will always see well, even if they need magnifiers for some fine tasks. A person who can still use their own accomodative system has the best of all worlds in Premium lens implants, because they can see distance, intermediate like computer, and many things at near.”

Dan Tran, MD
Long Beach, CA

“I use the Crystalens AO in patients who demand a good combination of vision clarity for their desired range of focus. The spherical aberration free Crystalens AO allows me to preserve the patients’ existing neurally adapted aberrations to optimize the balance between quality of vision and range of focus.”

Jay Pepose, MD
Chesterfield, MO

“The Crystalens AO is the first aspheric accommodating lens and this modification further enhances image quality. This may be particularly important in patients with larger pupils or those requiring higher dioptric powers. The Crystalens AO is also particularly forgiving in its defocus curve and its uniform power across the optic makes it immune to the effects of decentration with respect to the visual axis.”

Ramin Pirnazar, MD
Laguna Hills, CA

“I have been very pleased with the newest version of the Crystalens. It is very predictable, safe and provides high quality vision.”

Jonathan D. Solomon, MD
Bowie, MD

“I have been using the Crystalens IOL since Feb 2004 with great delight and success. I have found that our patients appreciate their wonderful clear vision, and now even more so with the AO. They rarely complain of visual aberrations or dysphotopsias, and I feel comfortable that they will always see well, even if they need magnifiers for some fine tasks. Crystalens® Accommodating Posterior Chamber Intraocular Lens
BRIEF STATEMENT
Rx only.

Indications for Use: The Crystalens® is intended for primary implantation in the capsular bag of the eye for the visual correction of aphakia secondary to the removal of a cataractous lens in adult patients with and without presbyopia. The Crystalens® provides approximately one diopter of monocular accommodation which allows for near, intermediate, and distance vision without spectacles.

Warnings: Careful preoperative evaluation and sound clinical judgment should be used by the surgeon to decide the risk/benefit ratio before implanting a lens in a patient. Some adverse events which have been associated with the implantation of intraocular lenses are: hypopyon, intraocular infection, acute corneal decompensation, and secondary surgical intervention.

Precautions: Do not resterilize; do not store over 45 °C.

ATTENTION: Refer to the Physician Labeling for complete prescribing information.
